It's our hope that you find the content of CareersLegalHelp.com valuable.

Q: Entity Framework with ASP.NET Identity I am going through this tutorial, and I am currently on Step 3: Using ASP.NET Identity. To summarize, I am trying to create an entity framework model that will use a database that has ASP.NET Identity. The sample code provided does not work, so I am hoping to find another solution. I am having trouble with Step 3: Configure ASP.NET Identity. I do not understand how I am supposed to connect the database to the ASP.NET Identity. Right now, I am getting the following error: 'IdentityManager' is inaccessible due to its protection level. I am new to ASP.NET Identity, but I believe this means that IdentityManager is not found by the code. How can I find the IdentityManager object? A: For me, the fix to this problem was that I had to add a reference to the Microsoft.AspNet.Identity.EntityFramework.dll file. I am not sure how EntityFramework.dll got added to the project, but it worked for me. The following works for me using Microsoft.AspNet. 82157476af
